Secabo Energy Saver Product Range – The Future of Energy-Efficient Transfer

The transfer press technology has set a new benchmark, and it arrives in the form of the Secabo Energy Saver product range. Integrate high-end technology and efficiency into your operations and embark on a green revolution in transfer press technology.

Key Features:

Energy Efficiency Meets High-End Technology:

A synergy of efficiency and modern technology that revolutionizes your way of working and energy balance.

Innovative Energy Saver Models:

Born out of extensive research and development, these models deliver striking energy savings with a unique insulation, drastically cutting down standby energy consumption.

Uniform Heat Distribution:

A unique construction ensures precise and consistent print results with every application.

Reduced Carbon Footprint:

Lower your operational costs and minimize your establishment's ecological footprint.

Flexibility and Modular Construction:

Easily exchange and retrofit base and heating plates to match your specific needs.

Precise and Efficient Workflow through Control App (SMART Serie):

Cloud-based database for transfer parameters, shorter transfer times, simple retrieval of preset transfer parameters, and controlling multiple transfer presses with a single mobile device.

Additional Features:

- Eco-Friendly Design: Conserves resources and minimizes ecological footprint.
- Optimized Energy Management: Minimal heat loss during operations.
- Consumption Analysis: Identify energy-saving potentials.
- Extended Lifespan: Less wear and tear due to reduced energy consumption.
- Smart Energy Features: Save additional energy with automatic shut-off and sleep mode.

Elevate the quality of your work, preserve the environment, and optimize your operational process – all of this is attainable with the Secabo Energy Saver product range. It's not just a product; it's an investment into the future.
